POMPE CENTRIFUGHE
MULTISTADIO

MULTISTAGE
CENTRIFUGAL PUMPS

IMPIEGHI

Le pompe centrifughe multistadio ad asse orizzontale della serie TM trovano impiego in impianti di alimentazione idrica, di sollevamento ad alta pressione, di refrigerazione, di riscaldamento, di irrigazione, di innevamento, di lavaggio, in impianti per alimentazione caldaie, per estrazione condensato.

CARATTERISTICHE COSTRUTTIVE

Pompe centrifughe multistadio ad asse orizzontale [TM,TMB] o verticale [TMV], azionate tramite giunto elastico idrodinamico, rotazione oraria vista lato comando.

Sistema multiplo di equilibratura delle spinte assiali: giranti con fori di equilibrio, tubo di ricircolo e tamburo di equilibrio sull'albero.

COMPONENTI

Corpo di aspirazione con bocca assiale [TM] o radiale [TMV,TMB]; stadio intermedio costituito da corpo di stadio e relativo diffusore dotati di anelli di usura. Sedi giranti sostituibili.

Corpo di mandata con bocca premente orientata verso l'alto, con possibilità di ruotarla di 90° in entrambi i versi.

Supporto cuscinetti lato comando ad elevata rigidità.

TM,TMV: supporto lato aspirazione del tipo a strisciamento lubrificato dal liquido pompato.

TMB: doppio supporto.

Albero in acciaio inox completamente protetto.

Tenuta sull'albero a baderna registrabile, in alternativa tenuta meccanica non bilanciata o bilanciata secondo la pressione di utilizzo.

DATI CARATTERISTICI

Pressione massima di esercizio: versioni 40 bar e 63 bar.

Temperatura liquido pompato: min: -15°C max: 120°C.

Temperatura ambiente [gruppo elettropompa]: max 40°C (oltre chiedere verifica).

Il liquido pompato deve essere chimicamente e meccanicamente idoneo per i materiali utilizzati.

MATERIALI

Giranti e diffusori: ghisa EN-GJL-250 o acciaio al carbonio.

Corpo di aspirazione, corpo di mandata e corpi di stadio: ghisa EN-GJL-300, ghisa EN-GJS-500, acciaio al carbonio.

Albero e bussole di protezione: acciaio inossidabile AISI 431.

Tiranti: acciaio al carbonio.

A richiesta versioni in acciaio inossidabile AISI 316 microfuso.

PRESTAZIONI

Prestazioni garantite con tolleranze conformi a UNI EN ISO 9906 Appendice A, a richiesta livello 1.

APPLICATIONS

The centrifugal multistage horizontal electric pumps of series TM are used in irrigation systems, systems of high pressure lifting, refrigeration, heating, snowing, cleaning, in boiler systems, in condensed extraction.

CONSTRUCTIONAL FEATURES

Centrifugal multistage horizontal [TM, TMB] or vertical [TMV] pumps driven by elastic hydro-dynamic coupling, clock wise rotation looked from drive side.

Combined axial thrust balancing system: impeller with holes, recirculation pipe and balance drum on the shaft.

COMPONENTS

Suction body with axial [TM] or radial [TMB, TMV] inlet; intermediate stage composed of stage body and corresponding diffuser with wearing rings.

Replaceable impeller seats.

Delivery body with upward outlet, with the possibility of turning in at 90°C, both directions.

Drive side bearing support with high rigidity.

TM, TMV: suction side support of sliding type, lubricated by the pumped liquid.

TMB: double support.

Shaft in stainless steel completely protected.

Adjustable packing seal on the shaft, in alternative not balanced or balanced mechanical seal, according to the working pressure.

External tie rods for tightening of the intermediate stages.

OPERATING DATA

Maximum working pressure: 40 bar or 63 bar.

Temperature of pumped liquid: min: -15°C max: 120°C .

Ambient temperature [group electric pump]: max 40°C. (please, request verification for higher temperatures).

The pumped liquid has to be chemically and mechanically suitable for the utilized materials.

MATERIALS

Impellers and diffusers: cast iron EN-GJL-250 or carbon steel.

Suction body, delivery body and stage casing: cast iron EN-GJL-300, cast iron EN-GJS-500 or carbon steel.

Shaft and protection bushes: stainless steel AISI 431.

Tie rods: carbon steel.

On request, stainless steel AISI 316 versions.

PERFORMANCES

Guaranteed performances with tolerances admitted by Standards UNI EN ISO 9906 Appendix A, level 1 on request.

TM-TMB-TMV: versione standard in configurazione 1

TM-TMB-TMV: standard version configuration 1

Serie TM-TMB-TMV: vantaggi

TM-TMB-TMV series: advantages

- ✓ Componenti progettati con spessori idonei per garantire la maggiore resistenza e durata alle pressioni d'esercizio.
- ✓ Ampia scelta di materiali (Ghisa grigia EN-GJL-250, Ghisa sferoidale EN-GJS-500, Acciaio inossidabile AISI 316).
- ✓ Flangiatura in PN 16 in aspirazione, PN 40 (PN 63 a richiesta) in mandata. Pressione massima di funzionamento: PN40 o PN63 a seconda delle versioni.
- ✓ Tre configurazioni possibili: TM (aspirazione assiale), TMB (doppio supporto e aspirazione laterale), TMV (verticale), tutte con possibilità di orientare le bocche.
- ✓ Disegno idraulico progettato con sistemi CFD e ottimizzato per ottenere i migliori livelli di efficienza idraulica abbinati ad una vasta gamma di curve Portata-Prevalenza.
- ✓ Di serie, Albero in acciaio inossidabile AISI 431 progettato per resistere ai carichi flesso-torsionali generati e protetto da sistemi antiusura. A richiesta, alberi in materiali diversi (Duplex, AISI 630).

1)Sistema di riduzione dei carichi assiali su tutte le versioni: tamburo di bilanciamento, giranti forate e tubo esterno di equilibrio (2). Diffusore di ultimo stadio per l'eliminazione dei carichi radiali.

3)Diverse configurazioni di tenuta meccanica o a baderna a seconda delle esigenze dell'utilizzatore, in funzione delle caratteristiche del fluido e delle condizioni di impiego.

4)Cuscinetti a sfere sovrardimensionati e preservati dagli agenti esterni per offrire una rumorosità di funzionamento ridotta e una vita utile elevata. Su richiesta versioni disponibili con cuscinetti in bagno d'olio e con oliatore a livello costante.

5)Anello di usura anteriore e posteriore, semplici da sostituire, per salvaguardare i diffusori, corpi e giranti.

6)Serie TM: Profilo dell'aspirazione studiato per aumentare la capacità di aspirazione, ridurre l' NPSH e la possibilità di cavitazione.

7)Cuscinetti reggispinata preposti alla sopportazione dei carichi assiale residui.

8) Serie TM e TMV: Bronzine in materiale antifrizione.

- ✓ Components designed with suitable thickness to guarantee greater resistance and life to the exercise pressures.
- ✓ A wide range of materials (cast iron EN-GJL-250, spheroidal cast iron EN-GJS-500, stainless steel AISI 316).
- ✓ Suction flanges in PN 16, delivery flanges in PN 40 (PN 63 on request). Maximum working pressure: PN40 or PN63 depending from versions.
- ✓ Three possible configurations: TM (axial suction), TMB (double support and lateral suction), TMV (vertical), all with the possibility of orienting the nozzle.
- ✓ Hydraulics design developed with CFD systems and optimized in order to obtain the best hydraulic efficiency levels, combined with a wide range of Capacity-Discharge Head curves.
- ✓ Standard with stainless steel AISI 431 shaft designed to resist to the bending-torsion load generated and protected by anti-wear systems. On demand, shafts made with different materials (Duplex, AISI 630).

1)Reduction system of axial loads on all versions : balance drum, impellers with holes and return pipe (2). Last stage diffuser for radial loads removal.

3)Different configurations of mechanical seal or gland packing according to the user's requirements, based on the fluid characteristics and the use conditions.

4)Oversized ball bearings and protected from outer agents to offer a reduced working noise and a long service life. Available versions with oil soaked bearings and with a constant-level oil feeder on demand.

5)Wear ring front and rear, easy to replace, to protect diffusers, stage bodies and impellers.

6)TM series: suction profile conceived to increase the suction capacity and to reduce the NPSH and the possibility of cavitation.

7)Thrust bearings used to support axial residual loads.

8)TM and TMV series: Bushings made of antifriction materials.
